

Growing Healthy Families

Module 2: Managing Our Weight

Objectives

- Identify appropriate weights for children and adults
- Recognize attitudes, family traditions, habits and routines that may contribute to obesity and long-term consequences
- Develop ideas for new routines, habits and traditions that will lessen the chances of obesity

Penny

2009-present

1959-2008

1909-1958

Body Fat

- **We all have different sizes and shapes.**
- **Body fat is important!**
 - **Maintains temperature**
- **Too much or too little body fat is unhealthy.**
- **A person can be:**
 - **Underweight**
 - **Average weight**
 - **Overweight**
 - **Obese**
 - **Morbidly Obese (prevents normal life functioning and is life threatening)**

Childhood Obesity

Doubled in children in the past 30 years causing:

- High blood pressure
- Hypertension
- Lower self-esteem
- Exercise intolerance
- Chronic inflammation
- Knee, joint and muscle disease
- Heart disease
- Sleep apnea
- Diabetes
- Asthma
- Discrimination

Recognizing Appropriate Weight

- **Calories - Activity = Weight**
- **Adults need fewer calories as they age.**
- **Are you an appropriate weight?**
- **What about your child?**

BMI: Body Mass Index

- Indicates if you are underweight, average weight, overweight or obese
- Child BMI
 - Growth chart and percentiles
- BMI that indicates a child is overweight or obese
 - Could have higher muscle mass
 - Could be overweight
 - See doctor to be sure

BMI (Body Mass Index) Table from the NIDDK

To Calculate Your Child's BMI

- You can access an automatic calculator from a computer or smartphone.
- Online go to:
https://www.cdc.gov/healthyweight/assessing/bmi/adult_BMI/english_bmi_calculator/bmi_calculator.html.
- If you do not have access to these sources:
 - Take your parent journal to the library or some place with Internet access
 - Use the URL in your journal to determine your child's BMI

Causes of Weight Management Issues

- **It is not just self-indulgence or not enough will-power!**
- **Children and adults can become obese due to:**
 - **Health problems and medications**
 - **Genetics and culture**
 - **Types of food selections**
 - **Lack of activity**

Causes of Weight Management Issues

- **Incorrect portion sizes**
- **Lack of available healthy foods**
- **Parents attitudes of big = healthy**
- **Parent food choices and example**
- **Giving children larger portions because they are heavier**

Traditions and Attitudes Can Lead to Weight Problems

- Use of lard and frying many foods
- Limited fruits and vegetables in diet
- Cooking with fattier and higher calorie ingredients on a regular basis

Traditions and Attitudes Can Lead to Weight Problems

- **Having less concern about being active**
- **Encouraging children to eat after they are full**
- **Believing chubbier is healthier**
- **Feeding overweight children extra portions**

Avoiding Weight Problems

- Limit food choices, but don't pressure your child about food.
- Let them choose among healthy foods!
- Offer lots of lower calorie foods that are filling:

- Soups and raw vegetables

- Small amounts of foods with some fat (more filling) such as olives, cheese and nuts as part of snack

Avoiding Weight Problems

- Don't encourage children (or adults) to eat after they say they are full
- Plan family walks and movement activities
- When watching TV, plan movement times
- Remember energy balance (number of calories eaten versus number of calories burned in activity)

Remember!

- **Children should not be put on strict diets except by a doctor!**
- **NO**
 - **Diet pills or weight reducing herbal teas**
 - **Restricting food to a limited amount**
 - **Pushing too hard to exercise**
